CERTIFICATIONS

Certified Red Team Operator (CRTO)
Zero-Point Security · May 2026

Certified Process Injection Analyst

F5 201 — Certified BIG-IP Administrator
F5 Networks

F5 101 — Application Delivery Fundamentals
F5 Networks

Hack The Box — Hacker rank
Active AD & post-exploitation practice

TECHNICAL SKILLS

Offensive Security
Web, API & mobile app testing · Infrastructure & network testing · Active Directory attack paths · Privilege escalation & lateral movement · Exploit validation

Detection & Response
Log analysis · Alert triage · Incident investigation · Forensic support · Root-cause analysis

Governance, Risk & Compliance
Security policies, standards & procedures · Risk assessment · Privacy compliance · Audit support

PLATFORMS & TOOLS

F5 BIG-IP ASM · F5 LTM · NGINX App Protect · Imperva · IBM QRadar · Security Onion · ELK Stack · CrowdStrike · BloodHound · NetExec · Nmap · Python

Sinij Chapagain

Information Security Specialist · Red Team & Application Security

Banking & financial services · Offensive security · Security governance · AI-assisted penetration testing

6+ yrs	2 banks	10+	CRTO
in cybersecurity	Class A, Nepal	institutions secured with F5 WAF	Certified Red Team Operator

PROFILE

Cybersecurity professional with 6+ years across banking, financial services, and government-facing projects in Nepal and Bangladesh. Combines hands-on offensive work — web, API, mobile, infrastructure, and Active Directory testing and red team exercises — with the detection, incident response, and governance experience a regulated bank needs. Deployed and supported enterprise WAF platforms (F5 BIG-IP ASM/LTM, NGINX App Protect, Imperva) in production for more than ten institutions. Currently completing an MSc in AI & Machine Learning, researching how AI agents can make authorized penetration testing more thorough and repeatable.

CORE COMPETENCIES

- **Red teaming** & adversary simulation
- **Penetration testing** — web, API, mobile, infra
- **Active Directory** attack-path analysis
- **Incident response** & breach reporting
- **Security governance**, policy & risk
- **WAF engineering** — F5, NGINX, Imperva

PROFESSIONAL EXPERIENCE

Information Security Specialist
JUL 2025 — PRESENT

Global IME Bank Limited · Kathmandu

- Conduct penetration tests across the bank's mobile, web, API, and infrastructure estate, delivering risk-rated findings and remediation guidance.
- Plan and run red team exercises that simulate real-world attack scenarios to measure the bank's detection and response readiness.
- Author post-breach and incident reports that support fast containment, root-cause analysis, and lasting control improvements.
- Monitor logs and alerts for anomalous activity and intrusions; develop forensic tools and techniques to support investigations and data recovery.
- Test security controls and perform risk assessments on critical systems; draft and maintain IT security policies and ensure privacy-law compliance during audits.
- Contribute to cyber threat intelligence, deliver staff security-awareness sessions, and lead research into AI/ML-assisted penetration testing.

EDUCATION

MSc IT, Artificial Intelligence & Machine Learning
Islington College, Kathmandu
2024 — Present

BSc IT, Computer Networking & IT Security
Islington College, Kathmandu
2018 — 2021

SECTORS

Commercial banking
Financial services
Government

REGIONS

Nepal
Bangladesh

PROFESSIONAL EXPERIENCE (CONTINUED)

Information Security Analyst
JUL 2023 — JUL 2025
Sanima Bank Limited · Kathmandu

- Performed penetration testing and ethical hacking across network, application, and system layers of critical banking environments.
- Wrote post-breach and incident reports that drove rapid resolution, lessons learned, and prevention strategy.
- Reviewed system logs daily and supported investigations into intrusions, attacks, and control failures.
- Researched newly disclosed threats and vulnerabilities to strengthen the bank's threat intelligence.
- Drafted security policy documentation and trained staff on privacy, acceptable use, and secure operations; researched and built computer forensic tools.

Application Security Engineer
JUN 2021 — JUN 2023
Digital Network Solution · Kathmandu

- Deployed and supported F5 BIG-IP Web Application Firewall, Local Traffic Manager, and related products for 10+ financial and government institutions in Nepal and Bangladesh.
- Analyzed application behaviour and traffic patterns in customer environments to design tailored WAF and application-security policies.
- Troubleshot production incidents, tuned protections, and advised internal and customer teams on operations.
- Trained trainees and customer users on network and application attacks and how to prevent them.

Trainee Penetration Tester
JAN 2021 — JUN 2021
Cloudsewa NP

- Performed supervised reconnaissance, vulnerability validation, exploitation, and remediation reporting for web applications and network services in client-approved environments.

Cybersecurity Intern
AUG 2020 — DEC 2021
Vairav Technology

- Supported vulnerability assessments and penetration tests, SOC/SIEM alert review and incident triage, and GRC documentation and baseline control checks.

RESEARCH & DEVELOPMENT

VIPT — Autonomous Vulnerability Intelligence & Penetration Testing (MSc prototype). Built an AI agent (~37k lines of Kotlin) that runs structured, authorized web-app assessments against lab targets. Combines four ML subsystems — a Naïve Bayes vulnerability classifier, a UCB1 reinforcement-learning payload selector, TF-IDF semantic retrieval, and an LLM analysis/critique debate engine — behind hard scope and authorization guardrails, with a precision/recall evaluation harness.

Offensive practice & writing. Ongoing Hack The Box work on Active Directory, Kerberos delegation, and privilege escalation; technical writeups published at sinijchapagain.github.io.
